

Dear valued customer,

the **Spiderbeam** 12m **Heavy Duty (HD) fiberglass telescopic poles** have enjoyed great popularity for many years. The sturdyness and stability served thousands of HAMs and other users all over the world to successfully develop their projects. But even if you already have a very good product, it is still a pleasure to expand it to meet the latest customer requirements. Some customers had the desire to get a little higher or to be even a little more stable at a height of 12m(40ft). So we have developed a modular extension and with our modular system of versatile usable partial lengths with the segments, we have created new products. Now anyone can extend his good old 12m HD mast ups to 14m with the same well known stability. Or he may create his own version between 2 and 14m using individual numbers of segments. Spiderbeam always offers every single replacement tube as an orderable product in our online store. To understand how the products offered and the individual segments fit together, here is a tabular overview.

- [MF14...*] **14m HD fiberglass telescopic pole**
- [MF12-XHD...*] **12m XHD version fiberglass telescopic pole**
- [MF12...*] **12m HD version fiberglass telescopic pole** (classic)
- [EMF-12-14...*] From 12m to 14m extension HD

*You will find various sets incl. accessories to each of the poles in our shop.

Spiderbeam modular system of HEAVY DUTY fiberglass poles

Original product of Spiderbeam GmbH, Otto-von-Guericke-Str. 3, 03130 Spremberg, Germany
